

# Northgate Vehicle Hire EVs and Charging Units Case Study

## GLOBAL COMPANY ELECTRIC VEHICLES AND CHARGING INFRASTRUCTURE

A global company that designs, manufactures, distributes and services dispensers to provide its customers with sustainable drinking water solutions.

**The Challenge:** They have been a Northgate Vehicle Hire customer since 2013, expanding their fleet from 20 vehicles to over 100 vehicles on 12months+ and flexible hire options, with each vehicle covering 25,000 miles per year. In line with its commitment to sustainability, the company has embarked on an electrification journey to transition its fleet to electric vehicles, necessitating the installation of charging infrastructure at their sites.

**The Solution:** They consulted with our in-house charging specialists, ChargedEV, to discuss their charging needs and explore options available for them. A customised quote, timeline and survey were generated to ensure all their requirements were met. Additionally, the business decided to upgrade their two Northgate Nissan e-NV200s to Peugeot e-Experts through Northgate's flexible hire option, to ensure their fleet is always aligned with their business needs. Subsequently, four charging points were installed across their sites and two more are scheduled for later this year.

**The Result:** The charging infrastructures were strategically installed across their sites for maximum efficiency and accessibility for their drivers, enabling the business to tender contracts sustainably and demonstrate its commitment to green credentials. The charging units are equipped with a management system that allows them to manage access to each unit, track how much energy is being used and by whom. In addition to the charging units, they are looking to further expand their electric fleet through Northgate, ensuring comprehensive support throughout their electrification journey.

*"The process of dealing with ChargedEV was streamlined and the pricing was competitive against other providers. The installation was quick and efficient."*
